Yia

AI Implementation for Small Business

March 2026

Make AI Work for Growth, Efficiency & Revenue.

SAMPLE PROPOSAL · All client-specific details appear as bracketed placeholders. This document illustrates the structure, depth, and value of the Yia AI Turnkey Toolkit program for a typical small business client.

Why This Program Exists

Most small business owners we meet face the same paradox: the Founder is excited about AI, but the team hasn't caught up. Marketing produces the same content the same way every week. Sales workflows stay manual. Operational tasks consume hours that should be billable. And the Founder is the only person in the building who actually sees what's possible.

This program is built for exactly that situation. It is not a philosophical AI overview. It is a 30-day deployment plan focused on the three areas where your business will see measurable impact fast — priced so it doesn't require a complex approval process.

Your Business at a Glance

Company	[Legal Name / DBA]
Team Size	[2–10] employees + [number] contractors · [Remote / Hybrid / In-Person]
Annual Revenue	~\$[X] in trailing twelve months
Customer Base	[Number and description of primary customers / clients]
Core Tools	[Project Management], [CRM], [Marketing / Communications Platform]
AI Today	Founder: [usage level]. Team: [usage level / hesitant]
Constraints	[Tight margins; competing priorities; no time to hire]
Key Challenge	[Primary barrier — e.g., no internal AI expertise, team skepticism]

Where AI Moves the Needle

Based on an initial discovery conversation, your highest-return AI opportunities fall into three lanes specific to how your business creates revenue — not a generic small-business playbook:

LEVER 1	LEVER 2	LEVER 3
Market Intelligence & Research	Customer Acquisition & Marketing	Operational Productivity
Replace hours of manual digging with minutes of AI synthesis. Turn competitive scans, lead research, and pricing intelligence into a repeatable workflow your team runs on demand.	Help your team produce twice the marketing output in the same hours. Launch personalized outreach campaigns and new revenue streams without adding headcount.	Give the Founder a real-time pulse on the business. Build a team-wide AI habit that compounds — change through proof, not persuasion.

What's Included in Your Program

Everything you need to deploy AI in your business in 30 days. No upsells, no surprises, no monthly retainer.

01

AI Readiness Assessment

A structured diagnostic tailored to your business. Pinpoints where to start before you spend a minute implementing anything.

02

Three Business-Specific Playbooks

Focused guides for Market Intelligence, Customer Acquisition, and Operations — each with problem framing, target outcomes, prompt libraries, and a 30-day action plan.

03

30+ Ready-to-Use Prompt Templates

Copy-paste prompts for your most common workflows: lead research, outreach, content production, proposals, reporting, and internal operations — organized by role and use case.

04

30-Day Implementation Roadmap

Week-by-week action plan so the Founder and team know exactly what to do, in what order, without getting overwhelmed or burning a week researching tools.

05

Team Adoption Toolkit

Simple usage protocols, a 'first win' exercise for resistant staff, and a 1-page guide the Founder can share to break down the 'I want to figure this out myself' barrier.

06

30-Day Results Review Call

A focused working session to review your actual results, troubleshoot what didn't land, identify your top wins, and surface the right questions for what comes next — based on your data, not a template.

What's Not Included — and Why That Matters

The \$1,500 program is intentionally scoped to get your business moving fast with proven, practical tools. The following items are where deeper consulting comes in — and where a longer engagement makes sense once you've seen what AI can do for your team:

- Custom prompt development for proprietary workflows or specialized industry data sources unique to your business.
- Platform integration strategy and data migration planning for your CRM, project management, or e-commerce stack.
- Design, pricing, and go-to-market strategy for a new AI-powered customer-facing product or service.
- AI usage policy documentation prepared for legal review or enterprise client procurement requirements.
- Live staff training sessions or workshops beyond the Team Adoption Toolkit.

PLAYBOOK 01

Market Intelligence & Research

Stop Compiling. Start Deciding. Free Your Team to Act on Insight.

THE PROBLEM

Your team burns hours pulling information from disconnected sources — websites, spreadsheets, CRM exports, competitor sites, industry reports — and assembling it into something usable. The work is slow, repetitive, and keeps your best people from doing the higher-value work only they can do for the business.

THE AI OPPORTUNITY

AI excels at exactly this kind of work: synthesizing large amounts of information quickly, spotting patterns, summarizing findings, and flagging what matters most. Your team stops being researchers and starts being decision-makers — with AI doing the compilation so they can focus on the judgment calls.

Outcomes We're Aiming For

- Cut time spent on manual research and information compilation by 50%+ within 30 days.
- Give the team a repeatable AI workflow for your most common research tasks — lead qualification, competitive scans, account research, market sizing.
- Free the Founder and senior staff to focus on strategy and client relationships, not data assembly.
- Build a prompt library the whole team can draw from independently — so research quality stops depending on one person.

MARKET INTELLIGENCE · PROMPT LIBRARY

PROMPT · LEAD QUALIFICATION & PROSPECT RESEARCH

I'm identifying high-fit prospects for [Company], a [industry] business that sells [product/service] to [target customer]. From the following list of leads, rank the top 5–7 by likely fit and explain in 2 sentences why each should or should not be prioritized this quarter. Flag any obvious mismatches,

recent funding events, or hiring signals that suggest now is the right time to reach out. Prospect list: [paste company names, sites, and any notes].

PROMPT · COMPETITIVE LANDSCAPE SCAN

I need a summary of the current competitive landscape in [industry / niche]. Specifically: Who are the top 5–7 competitors? What are the 2–3 dominant positioning angles in the market? Where are the obvious gaps a small, focused business could own? What pricing and packaging patterns are most common? What should a [revenue-stage] business entering or expanding in this space know before they invest in marketing? Summarize in under 400 words. Flag anything that warrants deeper research.

PROMPT · RESEARCH SYNTHESIS · MULTIPLE SOURCES

I've gathered the following information from [number] sources on [topic]: [paste summaries or excerpts]. Synthesize this into a single, coherent brief that identifies the key themes, notes where sources agree and disagree, highlights the most actionable findings for a small business, and flags any significant gaps in what's known. Under 300 words. Tone: analytical, direct, no fluff.

PROMPT · DECISION-MAKER MAPPING

I need to map decision-makers for a sales opportunity at [Target Account]. For each of the following individuals, provide: their likely role in the buying decision (champion / influencer / approver / blocker), their primary business priority right now based on public information, and one suggested opening message angle tailored to that priority. Keep each entry under 75 words. Stakeholder list: [paste names, titles, and any LinkedIn notes].

MARKET INTELLIGENCE · 30-DAY ACTION PLAN

WEEK	FOCUS	KEY ACTIONS	WIN BY WEEK'S END
Week 1	Audit & Map	■ Identify the team's 3 most time-consuming recurring research tasks. ■ Map the current workflow for each: what sources, how long, who does it. ■ Test 3 prompts against a recent completed research task to validate output quality.	■ Top research bottlenecks documented. ■ Three prompts tested and saved to a shared library.
Week 2	Build Library	■ Create 5 core prompts covering your most frequent research scenarios. ■ Train the team on how to structure raw information for AI synthesis. ■ Run one AI-assisted research task on a live customer opportunity.	■ Shared prompt library live in a team folder. ■ First AI-assisted research output produced and reviewed.
Week 3	Speed & Quality	■ Compare time on AI-assisted research vs. the prior manual approach. ■ Refine prompts based on output quality and team feedback. ■ Identify which data sources AI handles best and where human review is essential.	■ Time savings documented and shared. ■ Prompt library refined and expanded.

WEEK	FOCUS	KEY ACTIONS	WIN BY WEEK'S END
Week 4	Handoff & Scale	■ Document the standard AI research workflow for each of your top 3 use cases. ■ Share the prompt library with the full team — each person tests at least one. ■ Identify one recurring report or brief that becomes AI-first going forward.	■ Reusable AI research toolkit complete. ■ At least one recurring deliverable shifted to an AI-assisted workflow.

PLAYBOOK 02

Customer Acquisition & Marketing

Scale Outreach. Launch New Revenue Streams. Make Your Marketing 2x More Productive.

THE PROBLEM

Your marketing produces the same content formats every month and isn't using AI to do it faster. Result: same volume, same hours, growing frustration. Meanwhile, customer-facing outreach isn't as frequent or as personalized as it should be for a business with this much to offer.

THE AI OPPORTUNITY

AI doesn't replace your brand voice. It frees your team to apply it more often. The goal isn't copy-paste AI output — it's a workflow where AI produces the 80% first draft and your team applies the 20% that makes it sound like you. Same quality, twice the output, fraction of the time.

Outcomes We're Aiming For

- Build a 90-day customer content calendar in under 2 hours.
- Produce a full month of customer-facing communications in half the previous team time.
- Launch a new offer, package, or service line with a campaign that generates qualified inbound leads.
- Give the Founder a working business pulse scorecard they can update weekly in under 20 minutes.
- Have marketing producing segmented content for different customer segments without burnout.

CUSTOMER ACQUISITION · PROMPT LIBRARY

PROMPT · MONTHLY CUSTOMER NEWSLETTER OUTLINE

Create a monthly customer newsletter outline for [Company] for [month]. Our customers are [describe customer segment]. Topics this month: [list 2–3 items]. Include: an industry-relevant story angle, a customer success spotlight concept, an upcoming offer or event highlight, a market or pricing update relevant to customers, and one clear CTA. Format as headlines with 2-sentence

descriptions for each section.

PROMPT · NEW OFFER · LAUNCH EMAIL

Write a customer outreach email announcing a new [Company] offer: [describe offer and key benefit]. Price: \$[X]. Key message: [what makes this uniquely valuable]. Tone: confident, customer-first, value-forward — no hype. Under 200 words. CTA: book a call or buy now. Frame it as a way to solve a specific problem your customer is already trying to solve, not a sales pitch.

PROMPT · EVENT / WEBINAR PROMOTION · MULTI-CHANNEL

Write promotional copy for [event name] on [date]. Target: [describe audience]. Key benefits of attending: [list 2–3]. Featured speakers: [if applicable]. Registration: [URL]. Produce: (1) Email under 150 words, (2) LinkedIn post under 100 words, (3) Internal team announcement under 60 words, (4) Three subject line options. Tone: professional, high-value, peer-to-peer — written for a small business buyer, not a corporate audience.

PROMPT · FOUNDER / CEO PULSE SCORECARD · WEEKLY UPDATE

I'm the Founder of a [size]-person [industry] business. I need a weekly 1-page pulse report covering: pipeline (new leads, deals progressed, deals closed), revenue (this week vs. last, vs. plan), delivery (active projects, at-risk accounts), team (capacity, blockers), and cash (runway / receivables note). Here is this week's data: [paste bullet points]. Format as a clean executive scorecard. Use a traffic light system (Green / Yellow / Red) for each area. Include a 2-sentence 'week in summary' at the top.

CUSTOMER ACQUISITION · 30-DAY ACTION PLAN

WEEK	FOCUS	KEY ACTIONS	WIN BY WEEK'S END
Week 1	Audit & Plan	■ Review the last 3 months of customer-facing communications. ■ Identify gaps: what should have gone out but didn't? ■ Build the 90-day customer content calendar outline using AI.	■ Content gap analysis complete. ■ 90-day calendar framework ready to execute.
Week 2	Build Templates	■ Create a reusable monthly newsletter outline template. ■ Draft the launch email for a new offer, package, or service. ■ Build the Founder Pulse Scorecard template — leadership tests it this week.	■ Three reusable marketing templates created. ■ Founder Pulse Scorecard ready to use weekly.
Week 3	Workflow Adoption	■ Run a 2-hour AI workflow session with marketing or whoever owns content. ■ Produce one piece of customer-facing content end-to-end with AI assist. ■ Document the time comparison vs. the prior process — this becomes your internal win story.	■ Marketing has completed one full AI-assisted task. ■ Time savings documented for internal proof.
Week 4	Launch & Measure	■ Deploy the launch campaign for the new offer. ■ Send the first AI-assisted monthly newsletter. ■ Capture open, click, and reply data for the ROI worksheet.	■ First AI-assisted customer campaign is live. ■ Baseline engagement and revenue metrics captured.

PLAYBOOK 03

Operational Productivity

Build the Habit. Create Internal Champions. Run a Tighter Business.

"I need more advocates for AI inside my company. Right now I don't have those advocates. It's just me." — A small business Founder, in a typical first conversation with Yia

The goal isn't to mandate AI use. It's to give each team member one undeniable win — one task that used to take 45 minutes and now takes 10 — so resistance softens on its own. Change management through proof, not persuasion.

Outcomes We're Aiming For

- Give every team member at least one AI-assisted workflow they use weekly.
- Establish simple usage protocols so the team feels safe using AI with customer data.
- Identify and activate 1–2 AI features in your existing project management or CRM tool — start small, prove value first.
- Reduce time on repetitive writing tasks across the business by 40%+.
- Create at least one internal AI champion outside the Founder by Day 30.

OPERATIONAL PRODUCTIVITY · PROMPT LIBRARY

PROMPT · REPETITIVE DOCUMENT · FIRST DRAFT

I need to produce a [document type — e.g. client proposal / scope of work / project recap / quarterly business review] for [Company]. Key details: [bullet points of content]. Our standard format includes: [describe sections]. Write a complete first draft in our company voice: professional, direct, relationship-oriented. Flag any sections where you need more input from me.

PROMPT · SALES FOLLOW-UP · PERSONALIZED OUTREACH

Write a follow-up email to [prospect name] at [company]. Context of last conversation: [summary]. Their stated business priority: [what they care about]. Our specific value to them: [2–3 points]. Our ask: [next step — e.g. book a 30-minute call, send a proposal]. Under 150 words. Tone: peer-to-peer, value-first, no 'just checking in' language. End with a clear, low-friction CTA.

PROMPT · PARTNER / REFERRAL OUTREACH

Write an outreach email to a potential referral partner for [Company], a [size]-person business that serves [target customer]. We're proposing a [partnership type — e.g. co-marketing, referral program, joint webinar]. Key value to the partner: [2–3 specific benefits]. Our ask: [specific next step]. Under 200 words. Tone: peer-to-peer, mutual-benefit, no marketing-speak.

PROMPT · TEAM AI USAGE PROTOCOL · INTERNAL DRAFT

Draft a 1-page AI usage protocol for a [number]-person small business using Claude and ChatGPT. Include: what should never be entered into AI tools (customer PII, payment data, confidential contracts), what tasks are encouraged, a reminder that all AI output must be reviewed before sending externally, and a note on maintaining the company voice. Keep it practical and short — this should feel like a helpful guide for a small team, not a corporate compliance document.

OPERATIONAL PRODUCTIVITY · 30-DAY ACTION PLAN

WEEK	FOCUS	KEY ACTIONS	WIN BY WEEK'S END
Week 1	First Win Sprint	■ Identify one repetitive task per team member or function. ■ Each person uses AI for that task once — low pressure, no judgment. ■ Founder shares their Pulse Scorecard as the lead example.	■ Every role has tried AI at least once. ■ First wins documented and shared at the weekly standup.
Week 2	Protocols	■ Publish the 1-page AI usage protocol to the team. ■ Set up a shared prompt library channel in your team chat tool. ■ Activate one AI feature in your CRM or project tool and test with a small group.	■ Usage guidelines in place and acknowledged. ■ Shared prompt library live and getting contributions.
Week 3	Habit Building	■ Add a 15-minute 'AI share' to the weekly standup: what worked this week? ■ Sales and operations leads each try one independent AI workflow. ■ Review results from the CRM or project-tool AI test.	■ Internal AI conversations are happening organically. ■ Function-level adoption underway, not just Founder-led.
Week 4	Measure & Champion	■ Complete the ROI Tracking Worksheet together as a team. ■ Identify 1–2 staff members as ongoing AI leads. ■ Document the top 5 prompts that worked best this month.	■ Internal AI champion(s) identified by name. ■ ROI data ready for the next leadership planning conversation.

ROI Tracking Worksheet

Fill this in at the end of each week. In 30 days you'll have concrete data for your next planning conversation, your next hire decision, and your next investment.

WEEK	AI TASK COMPLETED	TIME SAVED	REVENUE / COST IMPACT	WHAT IT MADE POSSIBLE
Week 1				
Week 2				
Week 3				
Week 4				
TOTAL				

The Golden Rule of AI ROI · Don't just measure time saved. Measure what that time makes possible. Two hours saved on research isn't just efficiency — it's two hours your senior staff spend on revenue-generating work that compounds. Close that loop and this program pays for itself many times over.

Your 30-Day Results Review Call

A working session based on your actual results — not a template.

WHAT WE'LL COVER

- Review results across all 3 playbooks using your completed ROI Worksheet.
- Identify your top 3 wins and the prompts that worked best.
- Troubleshoot any workflows that didn't land as expected.
- Identify your 1–2 internal AI champions and next steps for supporting them.
- Surface the highest-impact question for what comes next.

COME PREPARED WITH

- Your completed ROI Tracking Worksheet.
- One prompt that worked really well.
- One task where AI didn't help — we'll fix it together.
- Your biggest unanswered question about team adoption.
- Your honest read on team resistance: better, same, or worse?

Investment & What Happens Next

TOTAL INVESTMENT

\$1,500

One-time · Full program · No monthly commitment

All 3 playbooks · 30+ prompts · 30-day roadmap · Team Adoption Toolkit · 30-Day Results Review Call

For context: the new revenue streams and workflow efficiencies this program unlocks typically generate direct revenue lift or payroll savings within 60 days. Most clients see this program pay for itself before the Results Review Call — and that's a conservative estimate.

What Comes After 30 Days?

OPTION A

Continue Independently

Take the playbooks and run. All materials are yours: prompts, roadmap, ROI worksheet. Continue at your own pace with no further commitment.

OPTION B

Yia 90-Day Engagement

For the work that needs a strategic partner: custom integrations, AI-powered customer offers, workflow development, and team enablement. Scoped to your revenue stage.

OPTION C

Refer the Network

Other small business owners in your network may need exactly this kind of support. Yia offers a referral arrangement for founders who introduce a fit-right client.

A Note from Yia

The businesses we work with most often aren't starting from zero on AI. The Founder or a key team member is already using it daily and can see exactly what it could do for the company.

The challenge is almost never the technology. It's that one person carrying the vision, with no one else in the room who's caught up yet.

This program is built to change that — not with a training mandate or a tech overhaul, but by giving each person on your team one small, undeniable win. The kind of moment where someone finishes a 45-minute task in 10 minutes and can't help but show a colleague. That's how small businesses actually adopt AI.

We'd love to explore whether this is the right fit for your business.

— **DeVere Kutscher, Yia**
